

STEP BY STEP GUIDE ON EMBEDDING JS IN PDFs

Prerequisites: Understanding the basic structure of a PDF:

- Header: declaring the PDF version
The header always begins with %PDF- followed by the version number.
e.g. : %PDF-1.7
- Body: Contains all the **objects** that make up the document — text, fonts, images, JavaScript, annotations, metadata, etc.
Structure would be like:

```
3 0 obj
<<
  /Type /Page
  /Parent 1 0 R
  /Resources 2 0 R
  /Contents 4 0 R
>>
Endobj
```

Here:

3 0 obj — object number and generation number.

/Contents 4 0 R — reference to another object (object #4).

(Now, this is the main part where the script goes in)

- Trailer: Points to the root object of the document.

```
trailer
<<
  /Root 1 0 R
  /Info 2 0 R
>>
%%EOF
```

/Root — points to the catalog (the main entry point of the document).

/Info — metadata like author, creation date.

%%EOF — marks the end of the file.

For crafting PDF containing JS, we need mainly following objects: /Catalog, /OpenAction and /JavaScript

- **/Catalog**: marks the root object of the PDF:

e.g: /Type /Catalog

- **/OpenAction**: Defines an action to perform when the document is opened

e.g:

- **/JavaScript**: Embedded script object

e.g: 6 0 obj << /S /JavaScript /JS (app.alert('test')) >> endobj

Now, let's get into the action:

1. Open your PDF in notepad. Locate the catalog:

```
File Edit View
611 0 obj
998453
endobj

612 0 obj
<< /Annots [ ]
/Type /Page
/MediaBox [ 0.000000 0.000000 1663.000000 1180.000000 ]
/Resources 609 0 R
/Contents 610 0 R
/Parent 613 0 R
>>
endobj

613 0 obj
<< /Kids [ 612 0 R ]
/Count 1
/Type /Pages
>>
endobj

614 0 obj
<< /Pages 613 0 R
/Type /Catalog
>>
endobj

xref
0 615
```

2. Add the following block of code in the PDF:

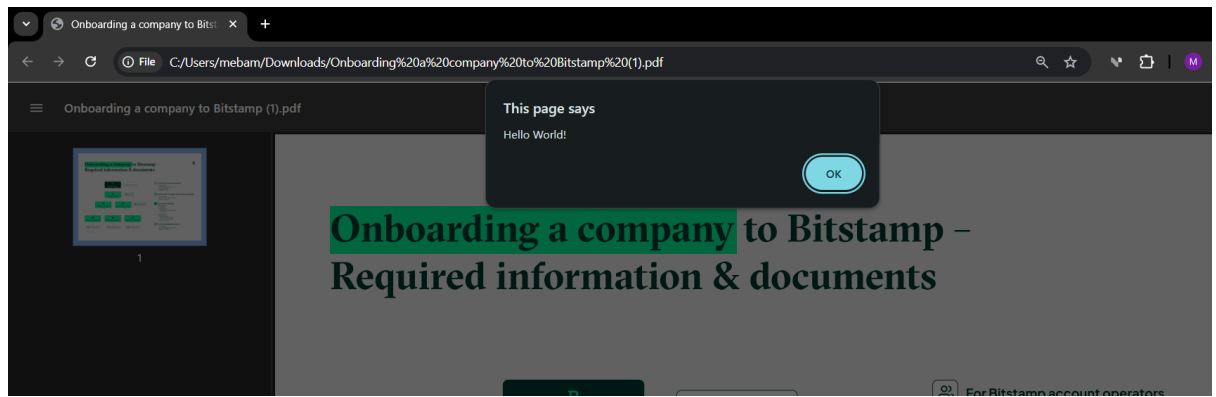

```
File Edit View
611 0 obj
  998453
endobj

612 0 obj
  << /Annots [ ]
    /Type /Page
    /MediaBox [ 0.000000 0.000000 1663.000000 1180.000000 ]
    /Resources 609 0 R
    /Contents 610 0 R
    /Parent 613 0 R
  >>
endobj

613 0 obj
  << /Kids [ 612 0 R ]
    /Count 1
    /Type /Pages
  >>
endobj

614 0 obj
  << /Pages 613 0 R
    /Type /Catalog
    /Names << % the Javascript entry
      /JavaScript <<
        /Names [
          (EmbeddedJS)
          <<
            /S /JavaScript
            /JS (
              app.alert('Hello world!');
            )
          >>
        ]
      >>
    >>% end of JS entry
  >>
endobj
```

3. Save it and open in browser:

Real world example:
